

Expanded high-confidence physical STRING networks

A Prioritized candidates

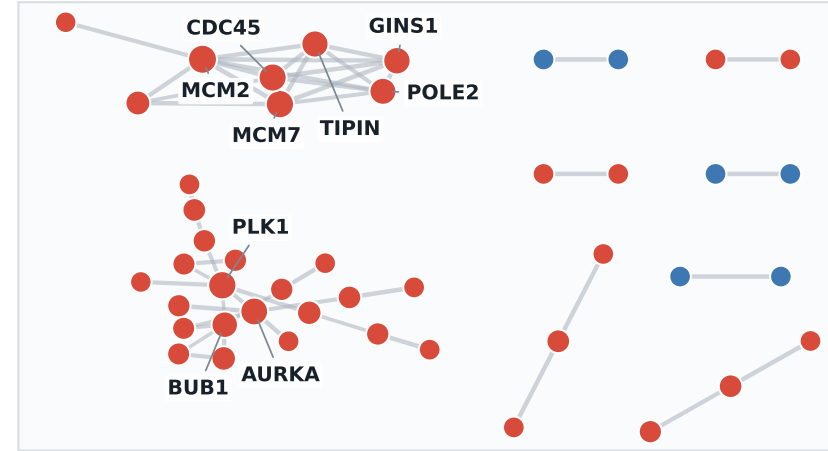

Mocetinostat

45 selected nodes · 49 within-subset edges

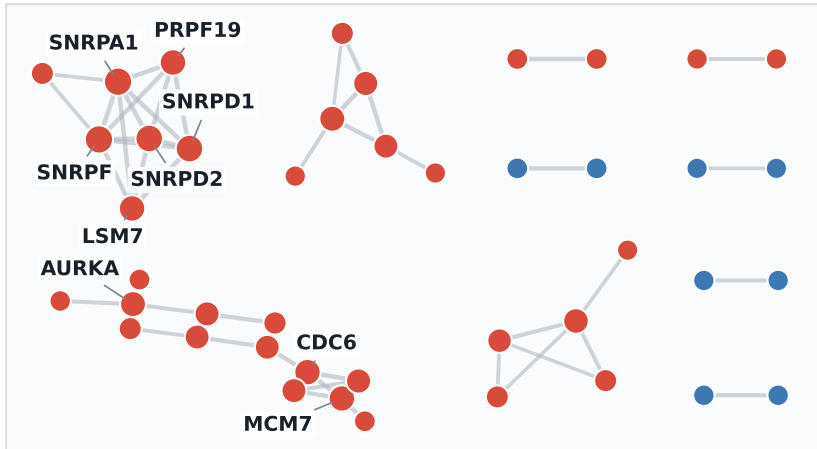

NCH-51

45 selected nodes · 51 within-subset edges

TC-H-106

43 selected nodes · 52 within-subset edges

Interpretation key

- Disease-up / drug-down
- Disease-down / drug-up
- Context-dependent

Node area $\propto$ physical-network weighted degree

Edge width $\propto$ STRING physical score

Labels identify the nine leading hubs

Layout note

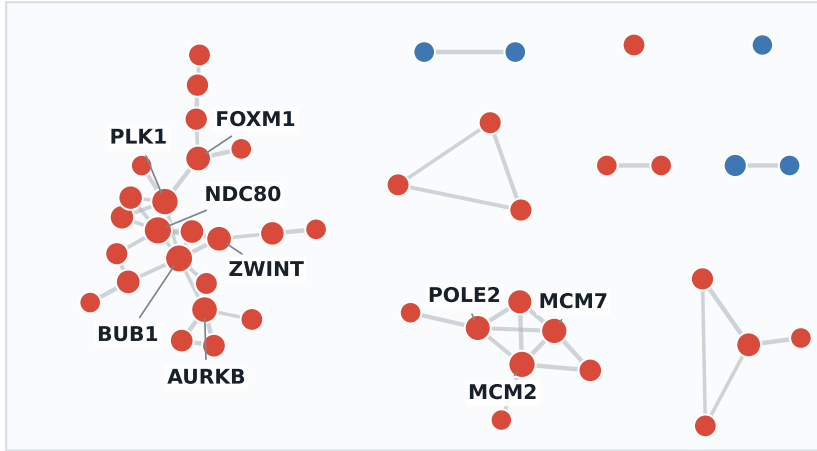

Components are packed separately for legibility.
Inter-component distance has no biological meaning.
Singletons have no retained within-subset edge.

Expanded high-confidence physical STRING networks

B HDAC controls

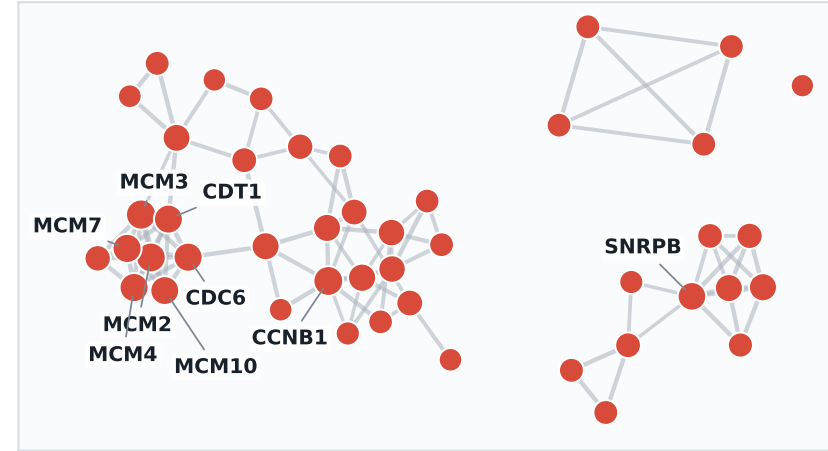

Belinostat

45 selected nodes · 52 within-subset edges

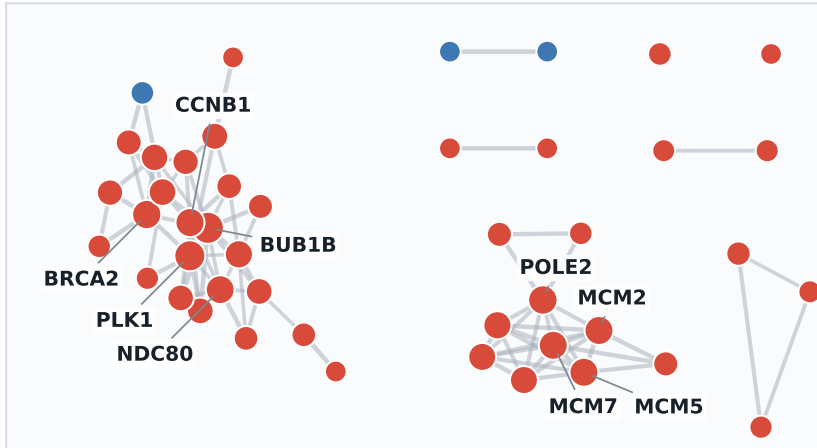

Entinostat

45 selected nodes · 95 within-subset edges

Vorinostat

45 selected nodes · 90 within-subset edges

Interpretation key

- Disease-up / drug-down
- Disease-down / drug-up
- Context-dependent

Node area $\propto$ physical-network weighted degree

Edge width $\propto$ STRING physical score

Labels identify the nine leading hubs

Layout note

Components are packed separately for legibility.
Inter-component distance has no biological meaning.
Singletons have no retained within-subset edge.
