

Measured LINCS reversal under official dose, time, cell, and QC metadata

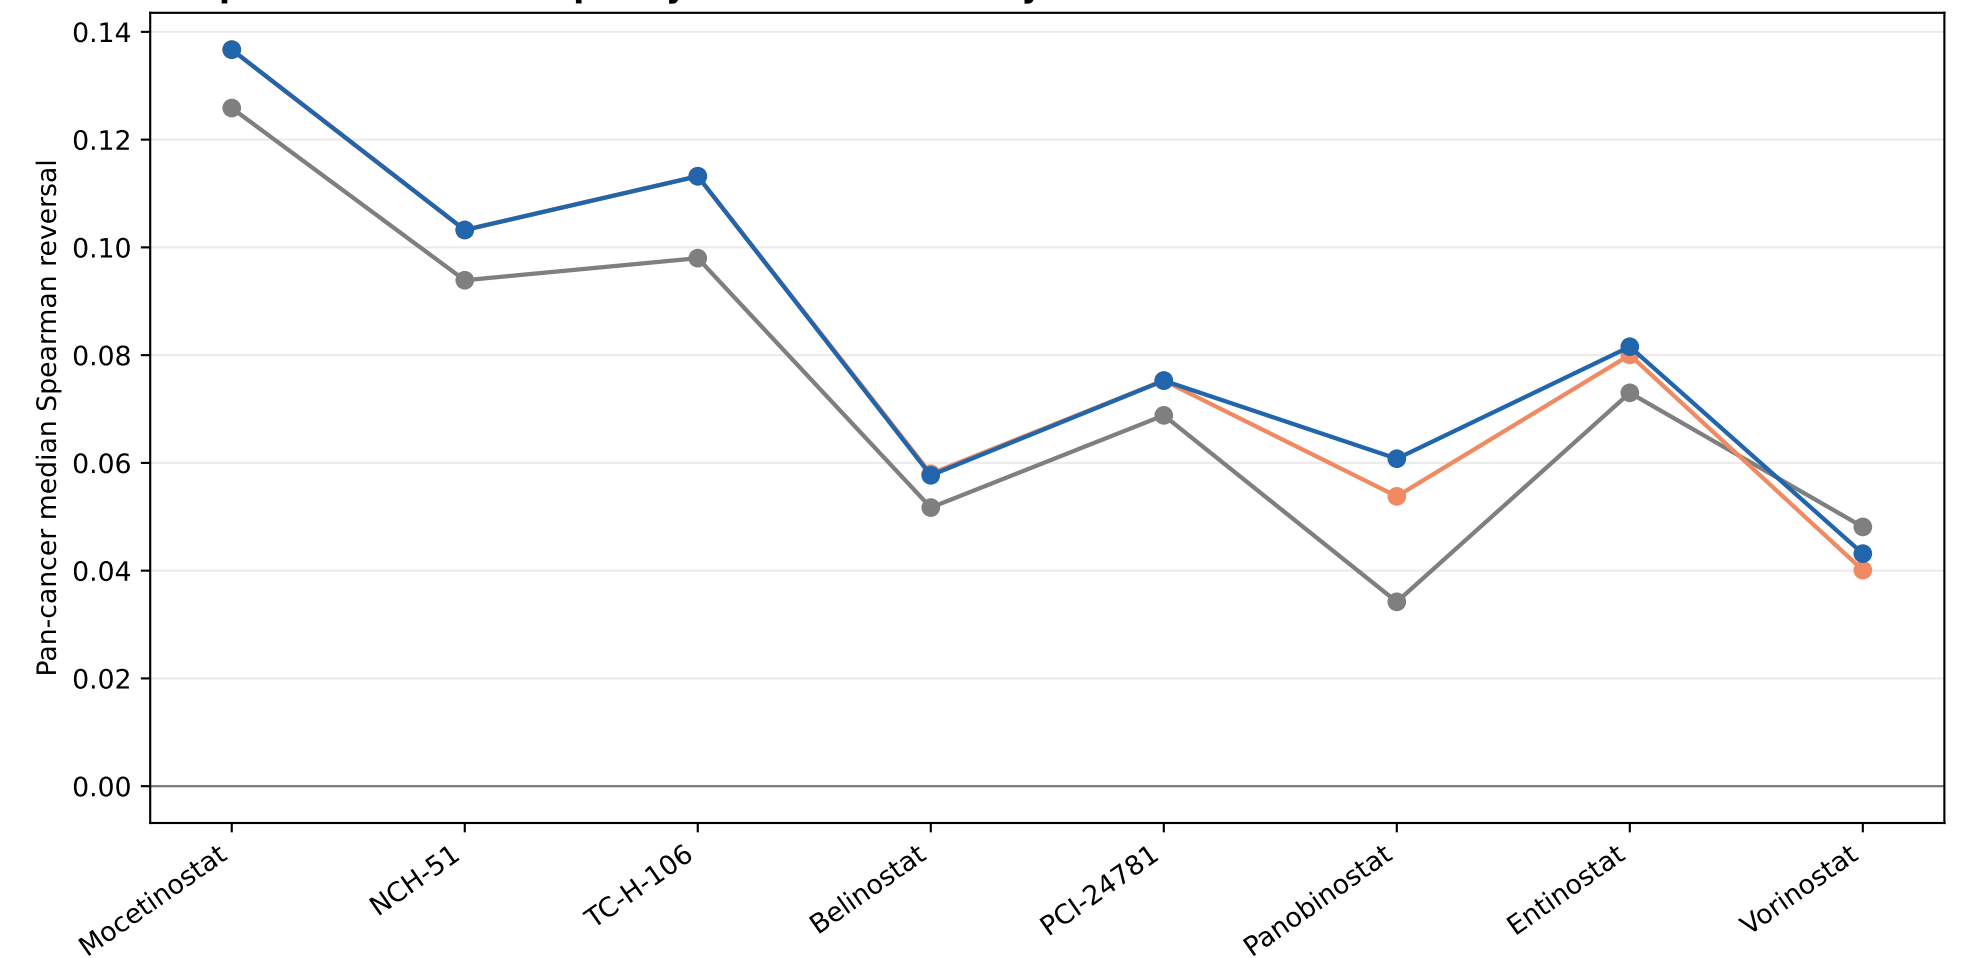

A HiQ measured Spearman reversal, aggregated condition → official cell line

B Signed WTRS: quality-stratum sensitivity

C Spearman reversal: quality-stratum sensitivity

Official siginfo is authoritative. Scores are summarized within dose/time condition, then within official cell line, then across cell lines. RG2833 has no measured signature; the identity-conflicted Tianeptinaline/BG-1010 row is excluded from primary panels.
